CAT C9 Acert & Non-Acert Engine Installation Instructions

- 1) Locate the injector connector on the side of the engine head and unplug it. It will be located on the same side as the air intake tube. **Note:** You may need to remove a 10mm nut to allow enough room to remove the injector plug from the head

2) Plug the male connector from the module into the stock female connector on the engine. Plug the stock injector harness that was removed in Step 1, to the female connector from the module.

3) Locate the MAP Sensor. It is on the same side of the engine as the air intake and it will be closer to the “Fan side” of the engine.

4) Unplug the stock MAP sensor.

5) Plug the male connector from the Ag Diesel Solutions harness into the stock MAP Sensor. Plug the female connector from the Ag Diesel Solutions harness to the stock connector that was removed from the MAP Sensor.

6) Route the power and ground wires over the top of the engine to the alternator, located on the opposite side. Connect the red wire to +12 volts and the black wire to ground.

7) Plug the Harness into the module. Mount the module with supplied zip ties away from any excessive heat or moving parts.

Note: Zip tie the module to the factory wire harness. Mounting the module with the connector down will help prevent moisture from collecting into the module connector.
